advances in qualitative methods and recent developments in the philosophy of science have led to an emphasis on explanation via reference to causal mechanisms this book argues that the method known as process tracing is particularly well suited to developing and assessing theories about such mechanisms the editors begin by establishing a philosophical basis for process tracing one that captures mainstream uses while simultaneously being open to applications by interpretive scholars equally important they go on to establish best practices for individual process tracing accounts how micro to go when to start and stop and how to deal with the problem of equifinality the contributors then explore the application of process tracing across a range of subfields and theories in political science this is an applied methods book which seeks to shrink the gap between the broad assertion that process tracing is good and the precise claim this is an instance of good process tracing

process tracing in social science is a method for studying causal mechanisms linking causes with outcomes this enables the researcher to make strong inferences about how a cause or set of causes contributes to producing an outcome in this extensively revised and updated edition derek beach and rasmus brun pedersen introduce a refined definition of process tracing differentiating it into four distinct variants and explaining the applications and limitations of each the authors develop the underlying logic of process tracing including how one should understand causal mechanisms and how bayesian logic enables strong within case inferences they provide

this handbook provides a critical review and user s guide to conducting and reporting process tracing studies of decision making each chapter covers a specific method that is presented and reviewed by authors who are experts in the method s application to decision research the book ultimately illustrates and presents a multi method approach and is essential reading for graduate students and researchers wishing to undertake such studies on decision making

process tracing is a fundamental method of qualitative analysis while it is often invoked by scholars as they examine qualitative data too frequently this tool is neither adequately understood nor rigorously applied this deficit motivates the present article which offers a new framework for carrying out process tracing this reformulation integrates discussions of process tracing and causal process observations gives greater attention to description as a key contribution and

emphasizes the causal sequence in which process tracing observations can be situated in the current period of major innovation in quantitative tools for causal inference this reformulation is part of a wider parallel effort to achieve greater systematization of qualitative methods a key point here is that these methods can add inferential leverage too often lacking in quantitative analysis the presentation is accompanied by teaching exercises which focus on three examples from international relations one from american politics two from comparative politics and one from public health epidemiology

process tracing is a within case method of drawing inferences from evidence in a case to theories about hypothesized causal mechanisms that might explain the outcome of that case the comparative methods in this report include comparisons among small numbers of case studies that use process tracing the report discusses four approaches to process tracing traditional narrative based analysis van evera s 1997 analytic tests bayesian process tracing and process tracing that aspires to the relatively complete elucidation of causal mechanisms this report focuses on analytic transparency leaving transparency in generating and sharing evidence to other qtd reports as recent methodological advances in process tracing have been rapid and are the subject of ongoing debates the report differentiates between core recommended practices and emerging practices that might be considered depending on the costs entailed by authors reviewers and readers for each research practice the report provides exemplars
